My comments.

Lee Dedini, Bayside, Ca.

Request to make sure Nordic commits to the following required mitigations:

1. An explicit requirement in the EIR that the project will, from day one of operations, be powered solely through renewable energy.
2. The project shall maximize its feasible onsite renewable energy production through more aggressive utilization of solar, including over parking areas.
3. The project shall use refrigerants with a global warming potential of under 150.
4. The food fed to the salmon shall be certified to have the lowest greenhouse gas footprint commercially available.
5. Modeling of ambient water quality shall use data from the mixing zone near the RMT II diffuser, instead of the data taken from Humboldt Bay (approximately 3.5 miles south-southeast of the discharge point).
6. Baseline monitoring and continuous monitoring of the effluent shall be performed by experts and compared to an established threshold which would trigger protective actions.
