Subject: Nordic fish farm

Hello, as a born and raised local Arcata resident I would like the following requirements for the proposed Nordic fish farm. Thank you

1. An explicit requirement in the EIR that the project will, from day one of operations, be powered solely through renewable energy.
2. The project maximizes its feasible onsite renewable energy production through more aggressive utilization of solar, including over parking areas.
3. An adaptive management provision that requires Nordic to buy locally-produced renewable power as it is commercially available.
4. Modeling of ambient water quality using data from the mixing zone near the RMT II diffuser, instead of the data taken from Humboldt Bay (approximately 3.5 miles south-southeast of the discharge point).
5. Baseline monitoring and continuous monitoring of the effluent should be performed by experts and compared to an established threshold which would trigger protective actions.
