Subject: Nordic Fish Farms

Dear Folks, we agree with the Northcoast Environmental Center and others regarding concerns about the Nordic Fish Farms DEIR. Please consider addressing these issues:

- An explicit requirement in the EIR that the project will, from day one of operations, be powered solely through renewable energy.
- The project maximizes its feasible onsite renewable energy production through more aggressive utilization of solar, including over parking areas.
- An adaptive management provision that requires Nordic to buy locally-produced renewable power as it is commercially available.
- Modeling of ambient water quality using data from the mixing zone near the RMT II diffuser, instead of the data taken from Humboldt Bay (approximately 3.5 miles south-southeast of the discharge point).
- Baseline monitoring and continuous monitoring of the effluent should be performed by experts and compared to an established threshold which would trigger protective actions.

Sincerely,

Nancy Keleher

Sam Morrison
