Re: General Plan Update  
Group 4, Chapter 11, Economic Development

Dear Commissioners:

My principal concern with this chapter is the omission of several items from Alternative A. Absence of support for such basic things as "skilled & ready workforce" and "public water and wastewater" would make Alt A completely unsupportable by any reasonable person. Others, such as "streamlining," might be a bit more questionable, but I think that most environmentally concerned people would support them with some modifications.

My "ballot" for this chapter is attached. Here is a brief summary of my comments:

ED-G1 – Alternative A wording should be essentially the same as Alt B-C, except that it adds, "and strengthening local industry."

ED-G4 and ED-G5 – should be included in Alternative A.

ED-G6 – Include in Alt A with addition, "including improvements to public transportation and non-vehicular paths and trails."

ED-G7 – Include in Alt A.

Note that these last two goals, transportation networks and public water and wastewater, are intrinsic to an environmentally sound plan. As a board member of Redway CSD, I am particularly aware of the importance of "adequate public water and wastewater facilities" in protecting not only public health, but also our watersheds, our wildlife habitat, and recreation and tourism on our streams, rivers, and bay.

ED-P2 – Include in Alt A.

ED-P6 – Modify wording as follows: "Work with communities to promote the appropriate revitalization ...." By working with the communities involved, and by identifying the appropriate types of revitalization, we can avoid repeats of the Redevelopment debacle. The great flaw of the Redevelopment effort – and I'm speaking as an early and outspoken opponent of redevelopment in Redway – was not consulting with the communities **before** the plan was presented to the state to determine if the communities believed this was an appropriate type of revitalization for their town. Community support at the get-go is absolutely critical to the success of any revitalization effort. Early and honest (not goal-directed) outreach to the community also respects local self-determination, and goes a long way toward establishing constructive relationships between each community and County government.

ED-P10 – Include in Alt A. Appropriately located, well-planned and designed industrial parks with master environmental assessments would certainly enhance the County's ability to accommodate economic growth without materially damaging our environment.

ED-P13 – Include the first wording in Alt A and delete the "alternative" wording. Increased broadband capacity would certainly encourage "clean" businesses in rural areas of the County, as well as having many social benefits. I don't know of anyone who's opposed to this, regardless of their political or philosophical leanings.

ED-IM3 – add wording, “where appropriate.”

ED-IM5 – Modify the wording and include in Alt A. With wording that applies some cautionary language to the proposed implementation measure, streamlining can be advantageous to good, environmentally-friendly businesses of the type the County wants to encourage. The modified wording simply requires that ordinances are reviewed for streamlining “without conflicting with other goals and policies of the framework General Plan.”

ED-IM7 – Modify to add “make available to interested public” to this measure re informed public. This seems like a logical addition to the proposed measure.

Thank you for your consideration.
