
Appendix A Implementation Action Plan

Introduction

Each element of the General Plan contains background information and a series of goals, policies standards and implementation measures. It is the responsibility of the County to implement the General Plan through its actions. According to California Government Code Section 65103, the County is required to “implement the general plan through actions including, but not limited to, the administration of specific plans and zoning and subdivision ordinances.” Implementation of the General Plan will require a multifaceted approach given the scope of the General Plan and the County’s diverse communities and geographic scope.

Implementation Action Plan

For the most part, the implementation measures in the General Plan are programs, steps or processes intended to help achieve the outcomes defined by the goals and policies of each element. However, the County must take additional steps to implement each action. In this Implementation Plan, each action is organized to reflect the overarching goal and policy of a General Plan Element. In some instances, policies and standards are not directly associated with an implementation measure, such policies and standards are listed and the implementing actions are identified as though they are implementation measures. The General Plan contains a total of 224 implementation measures. In addition, the General Plan contains 170 policies and 77 standards that are not directly associated with an implementation measure.

The Implementation Action Plan arranges implementation measures in the Chapter order of the General Plan. The implementation measures are presented in a table that identifies the method of implementation, responsibility for implementation, timing of implementation, cost of implementation as well as the policies in the corresponding General Plan element.

Implementation Phases

Immediate and Ongoing Actions

Some of the implementation measures, policies, and standards that do not have associated implementation measures, will be implemented immediately as part of project review and these actions will occur on an ongoing basis. Examples include S-P11, Site Suitability, where new development may only be approved if it can be demonstrated that the proposed project will neither create nor significantly contribute to, or be impacted by, geologic instability or geologic hazards.

The Implementation Action Plan identifies approximately 70 percent of the implementation measures as being implemented immediately or on an ongoing basis. Although some of the implementation measures that are identified as being implemented immediately or on an ongoing basis also involve an amendment to the Zoning or Building Regulations, Current Planning staff can refer to these policies or standards during the review of a proposed development project.

Within 1 to 2 Years

The first two years following the adoption of the General Plan will involve some of the most critical implementation programs. Among the most important will be the Zoning Map amendments to resolve Zone Classification/General Plan Land Use inconsistencies resulting from the General Plan Update and the precise Zoning Map amendments to apply appropriate Zone Classifications to areas currently zoned Unclassified. In addition, there will be need to make amendments to the Zoning Regulations to modify regulations changes by the General Plan Update such as Streamside Management Area regulations, and to implement new Zone Classifications such as the new mineral resources (MR) combining zone. State planning guidelines suggest that these changes that relate to General Plan consistency should be completed within two years.

Within 5 Years

During the first two to five years after the adoption of the General Plan, broader planning will take place to implement new programs to facilitate commercial development, streamline permitting, and to protect important resources. Examples include;

- FR-IM6. Streamline County Forest Management Regulatory Requirements. Develop streamlined processes for hazard tree removal, fire safety hazard reduction, and other forest management activities under County jurisdiction.
- UL-P3. Streamlined Approval of Business Expansion. The County shall streamline the approval process for business development.
- WR-IM1. Critical Water Supply and Watershed Area Ordinance. Prepare and adopt an ordinance to implement Critical Water Supply and Watershed Area policies.

For each implementation measure, and policy and standard not directly associated with an implementation measure, the following actions are identified (the following tables contain abbreviations of the following):
