Subject: Humboldt Wind Energy project

To Whom This May Concern,

The proposed Humboldt Wind Energy project of a 155MW is a crucial project for the region to meet its climate action goals. With that being said there should be a couple considerations that are added to the Final Draft EIR. For this projects effects on marbled murrelets there should be a consideration of how often marbled murrelets fly over ridges. Lastly, this EIR should also take into account other possible environmental impacts from renewable energy projects that would replace the power availability of this wind project if it were to not be built.

17-1

17-2

Thank you,
Roger Hess
