Subject: Proposed windfarm

I would like to a further objection to the windfarm as proposed. We are supposed to be contributing to saving the planet from greenhouse gasses! One of the principal ways to do that is REforrestation, NOT DEforrestation. 38 miles of deforestation is an abominable and unacceptable choice in a desperate time when every choice made is a make or break decision for the future of this planet.

I29-1

Every day brings news of just how desperate the situation is and how the negative developments are far more dire than predicted just months ago. It would be criminal to cut that many mature trees when it will take years and years to replace them in their full grown state.

Greenhouse gasses are threatening the future of all the younger generations and is already manifesting the future in escalating temperatures that will be untenable if we don't do everything possible to reverse the destructive course we are on. And any deforestation is absolutely the worst thing to do. Particularly if there is a perfectly viable alternative.
