---

I was unable to attend the meeting, but I have many concerns about this project going forward. My first concern is that these units are huge and the weight of these will truly impact the roads leading up to Monument/Bear River Ridge. There are already weight restrictions on logging trucks and equipment that go up those roads. The lower Monument Road has had slip outs and this will only make things worse.

My next concern is the environmental damage that will happen when we cut timberland and grade roads. The sediment will run down hill and into the Eel River and cause more damage to the salmon population. The California fully-protected species includes the Bald Eagle, California Condor, to name a few that will be impacted by this project.

We will have transmission lines from there to the substations which can only increase the fire danger. We already live in a tinder box. We have seen what power lines have done as far as fires are concerned. We only need to look at the Camp Fire origins.

My last part is purely subjective. I look out my bedroom window and see Monument Ridge and think how beautiful. I really don't want to see turbines on the hillside. I am opposed to this project.

Thank you for taking time to read my email. Sincerely, Sara Simonson
