Subject: Wind generation

Dear Elizabeth Burks,

I wish to register my concerns regarding the approval of the wind generation project in Scotia. Just because the site may be ideal for such a project should not mean that wildlife should take a backseat. Ditto for the tax benefits. Furthermore i have witnessed more than a few projects that were fast tracked by government employees cooperating with powerful special interests which resulted in projects that should not have gone forward, or were less effective than they might have been with proper planning and public participation. I have learned to trust my intuition whenever i have the feeling of getting "bum rushed" which i am getting regarding this project. I urge those in government responsible for this project to slow down a bit and address the concerns of those who speak for nature and the species already extinct, or facing extinction as a result of human activity.

I71-1

Thank you for your concern,

tim dellas
