County Wind Project Planner,

After living in Humboldt County for 40 years, and still going, I just want to say that this project sure seems to be just not good enough. We can do better. There are many choices out there, but to choose this wind farm proposal because it is better than the dependence of fossil fuels is not a reason to embrace it.

We need better choices.

The size of the turbines, the infrastructure it would take to keep it going, and not least, the hazards and disturbance to birds and wildlife is just not acceptable.

Really, are we going to make these sacrifices to our habitat and inhabitants just so Terra-Gen can get continue on this path?

They can do better....only if pressed to do so. And press for a better solution is what I want to see happen.

Industrial Timber has stepped up to our concerns to take care of this county's environment. Lets see this here and now with energy..

Please do not let this project move forward.....
