## Humboldt Wind Energy Project Planner

There is urgency given the time we don't have to address global warming, but this wind project seems to be lacking tremendously.

The 900 trees that will be cleared are a major carbon sink and that will be released. The soil, the grasslands also carbon sinks and all important habitat. The very thought that it is okay to "take" any condors (as consequential) is wrong, wrong, wrong.

The turbines use fossil fuel!!!!

The project is short lived.

Too much loss, no REAL gain

Need to focus on solar. Get those panels upon government buildings!!

Sincerely,

Kathryn Travers
