Subject: I say "No to this Wind generator project"
Date: Monday, June 10, 2019 9:56:19 PM

WTF?!...Who's responsible for writing the EIR for this mindless wonder of an idea? The wildfire threat alone should have taken this off the agenda! Never mind the impact on wildlife (what's left of it out here), marine life, water shed being disrupted, total disruption of the natural wind & fog currents flowing east into our many valleys, all the old growth trees being destroyed, can't replace them nor the function of cleaning the air they perform. What about the lights that have to be on alllll night? That's light pollution and what about the noise these things produce??? The birds and the bats that migrate through those corridors will be wiped out in few years. The many eco systems that would be destroyed, Stop this stupidity!
NO! NO! NO! TRASH THIS PROJECT! It's just plain greed...

I124-1

Put Wind generators in the desert where there is open treeless areas, that's a better location, no trees to tear down.
