Subject: Humboldt County Wind Turbine Project

I am writing in support of the proposed wind turbine project. My perspective is this: nothing I have read about negative impacts of the proposed project is anywhere near as bad as continuing our present dependence on fossil fuel generation of electricity. Human caused climate change is real, deadly, and we need to take action now to mitigate its impacts before we destroy our species, and many others. One way to do this is to encourage projects that will significantly impact the use of fossil fuels in electricity generation. There are many other steps we can take as a society, but this step of producing 30+% of Humboldt County’s electricity needs with wind energy is an essential one. From what I have read, I believe the project is well and thoughtfully designed, and should be approved.

I135-1

Sincerely,

James Vandegriff
