**Subject:** Crushing Wind Project

On Jun 14, 2019, at 10:09 AM, Alexis Davie <[alexis8@suddenlink.net](mailto:alexis8@suddenlink.net)> wrote:

Dear Editor and Whom it May Concern,

I am a landowner on Bear River Ridge with a compelling concern about the hydrology of our underground reserves including creeks, ponds, springs. What becomes of those precious resources beneath one wind generator turbine whose footing of cement is 30,000 tons. Three to six of these behemoths will set above the water source to Howe Creek a tributary to the Eel River. All my water comes from this point and I am fearful of the possibility of collapsed springs and these reservoirs. If I lose my springs, I lose my livelihood.

I181-1

Sincerely,  
Alexis Davie
