

Good afternoon health care partners,

PGE is estimating that 3562 customers will be de-energized Sunday afternoon with an anticipated restoration of Wednesday morning.

The following communities are expected to be impacted:

Alderpoint	Kneeland
Blocksburg	Miranda
Bridgeville	Myers Flat
Carlotta	Petrolia
Dinsmore	Phillipsville
Ettersburg	Redcrest
Fort Seward	Redway
Garberville	Weott
Harris	Whitethorn
Honeydew	

It is expected that the following facilities will be impacted:

RRHC Mobile Healthcare Services	101 W Coast Rd, Redway
RRHC Mobile Medical Office	101 W Coast Rd, Redway
Redwoods Rural Health Center, Inc.	101 West Coast Rd, Redway
Redway Elementary	344 Humboldt Ave, Redway
Southern Trinity Health Services	321 Van Duzen Rd, Mad River

At present time, there is no information regarding potential Community Resource Centers (CRCs) in Humboldt County, but we will provide an update once this information is received.

As always, this information is very preliminary and subject to change in the coming hours/days – the affected locations, time of de-energization/restoration and duration of the event could change as we get closer to the weather event.

For the most accurate indication of whether your facility or address will be affected, please visit:

<https://pgealerts.alerts.pge.com/addresslookup/>

At this time, the address search, the outage map for future safety shutoffs, and city/county listings include information for PSPS outages from 10/21-10/22. They do NOT currently include information about possible additional PSPS outages on 10/25. More information will be available 10/23 by 8 p.m.

OES is reaching out to Frontier Communications to assess their plan for continuity of services and will be reaching out to County Public Works/Roads to inquire about A-frame traffic signs with flashers for if/when signals go out. I have spoken with Public Health regarding critical facilities and medical baseline customers. Public Health will be reaching out to medical facilities and EMS service providers that may be impacted by the PSPS to begin initial coordination efforts.

Aside from the above-mentioned logistical components, our response strategy will largely focus around public information. We will communicate largely via email and social media to route residents towards PG&E's information and will provide relevant updates as information becomes available.

Individuals residing in the affected areas should begin preparing for up to a 96-hour outage. Preparedness tips for a power outage can be found at: <https://www.ready.gov/power-outages>

Respectfully,

Megan Montgomery
